

ACTIVITY

Critiquing a Related Product

Use this activity to help answer the main question tied to product prototyping, “What should the product look like?”

Instructions

Choose and critique an app or product that is similar to the one you are building. If you are working on the virtual assistant, then choose a productivity app of some kind. If you are working on your own product idea, choose a product that is focused on a similar user or problem. Study the app or product and critique it by answering the questions below.

Considerations:

What app or product did you critique?

Who is the target user?

What problem(s) does it solve?

Why is the product well designed? Be specific about design choices that have a strong impact on the product's usability or effectiveness.

How would you improve the product?
